The MART Corporation requires a copy of your Material Safety Data Sheet (MSDS) for each known chemical in your process waste stream being evaluated for EQ-1 Processing Technology. Also, please provide the waste stream source (i.e. aqueous cabinet washers, dip tanks, steam cleaners, pressure wands, anti-freeze and machine coolant recycling) and the reservoir volume. If you will discharge clarified solution to sewer, please provide acceptable discharge parameters from your publicly owned treatment works (POTW). This will allow MART to develop a formulation to meet these requirements.
